ABOUT ME

Result-oriented backend engineer with 7+ years in Java and Spring, mostly fintech and payments, plus prior experience leading engineering teams. Currently building and running a production SaaS end-to-end as its sole engineer.

EXPERIENCE

Founder & Engineer — Invoicing SaaS for Argentine Taxpayers

Remote

TuFactura

May 2026 – Present

- Designed, built, and shipped a production SaaS end-to-end as the sole engineer — invoicing, recurring billing, tax-authority integration, notifications, accountant/affiliate portals — including full data-privacy compliance (export, deletion, audit logging, encryption)
- Run the codebase on a spec-driven workflow: every feature ships with tests, backed by 10+ purpose-built internal tools for code review, DB auditing, compliance checks, and billing diagnostics

Senior Java Backend Engineer — Payments Platform

Remote

ERON International

Apr 2025 – Jun 2026

- Engineer and maintain integrations with 10+ LATAM payment providers within a microservices platform processing deposits and cashouts across multiple countries
- Diagnosed and fixed a critical race condition causing orphaned payments on a QR provider (Colombia), root-caused via log correlation and database analysis directly in production
- Introduced AI-assisted, multi-agent incident investigation workflows, parallelizing log and metrics queries across 15+ Java/Spring Boot microservices on Kubernetes — significantly cutting incident investigation and resolution time

Java Developer

Buenos Aires, Argentina

AstroPay

Feb 2024 – Mar 2025

- Owned end-to-end integration of a new bank as PSP for CVU operations and inter-account transfers in Argentina, from provider API design to production rollout, then led the full migration off the legacy provider

Java Developer

Buenos Aires, Argentina

Banco Industrial SA

Sep 2022 – Jan 2024

- Owned the front-end Sales application and established coding standards across multiple internal projects

2019 – 2022: Java Developer / Team Leader roles at DataArt (compliance plugins for a regulatory reporting system), Navent (led backend modernization of ZonaProp/Inmuebles24, migrating legacy services to Spring Boot microservices), Banco Credicoop (led team behind a Kafka-based validation system, resolving critical performance bottlenecks), and Baufest for BBVA (led a digital transformation project, analog banking processes to REST microservices).

Earlier Experience (2003 – 2018): Java/Spring backend and technical leadership roles across telecom (Verizon Business), IBM (compensation systems), telematics (ProKarma/Hughes Telematics), gaming (BairesDev/PlayPhone), and banking/risk (Decidir.com, Siemens Itron) through 2013; then Business Operations Lead at Textil DaiVak, a family SME, through 2018.

SKILLS

Skills: Java 17/21, Spring Boot, Spring Data JPA, Hibernate, Kafka, Microservices, REST APIs · AWS, Kubernetes, Docker, MySQL, Redshift · New Relic, Grafana/Loki · AI-assisted development (Claude Code)

EDUCATION, CERTIFICATIONS & LANGUAGES

Education: Systems Licentiate Degree, CAECE University (2007) · System Analyst, ORT Technological Institute (2001) · DevOps Diploma, UNC (2024) · Certified ScrumMaster (2010)

Languages: Spanish (Native), English (C1, EF SET Advanced 2022)
